EDM Offers Better Results

Why does EDM machining offer much better results than that of traditional solutions when working with metals and other hard metals? EDM machining uses electrical discharges to manipulate the physical shape of hard workpieces such as steel and exotic metals, leaving the piece smooth, seamless, and remarkably precise, with the option to make deeper cuts and create sharper edges. EDM tools are remarkably reliable and less prone to errors and can run with minimal intervention.

EDM Expertise

We take on the difficult jobs that others refuse and by doing so, have developed a depth of wire EDM knowledge and experience that is second to none.

Our rapid delivery of your wire EDM job can beat any schedule! It doesn't matter where you are located. We meet the demanding schedules of customers in 48 states and four countries for prototype and production EDM.

The most important question you have, as a customer, when outsourcing precision wire EDM work is "How long will it take?" With more than 55 high-speed Mitsubishi wire EDM machines, we can offer you the fastest production available anywhere. We can accept any electronic design file, and when a customer furnishes stock, we will wire-cut a sample finished part within a few hours and ship it out on the next available flight!

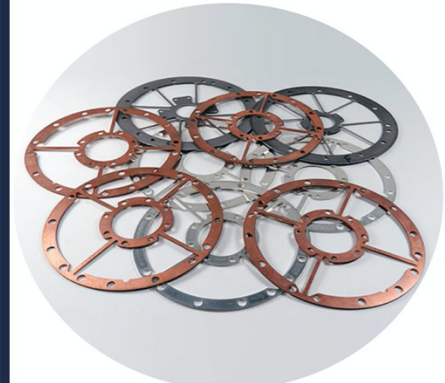

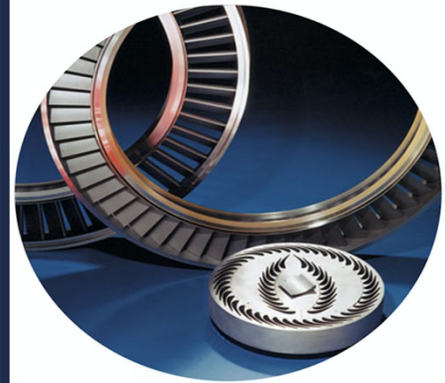

We can prove an EDM part in less than 12 hours.

Adron Tool Corporation serves major component and equipment manufacturers in almost every industry, including, Aerospace, Electronics, Defense, Energy, Medical, Automotive, Nuclear and Consumer Products.

Our remarkably short lead times benefit all our customers.

Let us put the Adron advantage to work for you, too.

EDM unlocks the potential to design parts for better function, without the restrictions of other metalworking processes. Many jobs with runs of 50 to 50,000 pieces are candidates for our production wire EDM service.
